

# “I want to look years younger.”

Overall facial rejuvenation can erase more than 10 years from your visage. Although you will continue to age after surgery, you can always expect to look 10 years younger than you would if you hadn't had surgery. Many different procedures are used together to improve the appearance of wrinkles and sagging, including facelifts, necklifts, browlifts, eyelid surgery, laser resurfacing and more.

**FACELIFT.**

Restores a more youthful position to skin, muscle and fat while eliminating excess skin, tightening muscle and redistributing fat.

**EYELID SURGERY.**

Addresses the skin, muscle and fat around the eyes to restore a younger, more rested appearance.

**NECKLIFT.**

Tightens sagging muscles and eliminates excess skin on the neck.

**BROWLIFT.**

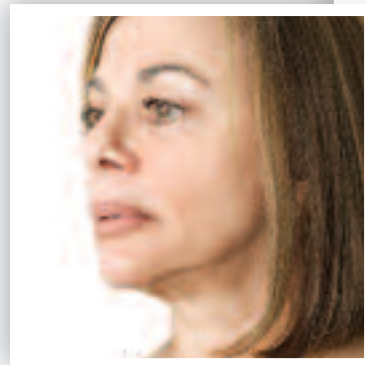

Elevates the brow to a more youthful-looking position.

**LASER RESURFACING.**

Eliminates damaged skin so it can be replaced with fresh, younger-looking skin.

“I am absolutely thrilled with how I look, and the results have far exceeded my expectations. When I look in the mirror I feel how I felt 20 years ago, and I have so much more confidence. I loved my doctor and everyone in the office, and even though I knew I'd look great afterward, I was most surprised by the special attention and care I received after the surgery.”

Facelift, necklift, fat grafting and full-face laser resurfacing.  
*Procedure performed by Jason Pozner, MD; Boca Raton, FL.*

According to Boca Raton, FL, plastic surgeon Jason Pozner, MD, “This patient came in complaining primarily about her neck and loose skin under her eyes. Her facelift involved tightening the muscles and removing excess skin, the fat grafting restored some of the facial fullness she had lost, and the laser resurfacing was the finishing touch to renew the skin and tighten the eyelids.”

MULTIPLE SURGICAL SOLUTIONS
